

ColorflexLED strips feature 18 LEDs per foot, which provides nearly 300% more LEDs than the competition! The close proximity of the individual LEDs delivers consistent, even illumination, a must for halo-lighting. The bendable Colorflex LED strips make it the perfect solution for those projects that are too small for neon. Colorflex LED products from Transco use standard "plug-n-play" connection wires so that no special tools or wire strippers are required for installation.

Aggressive pricing gives sign makers a more economical solution to LED and Neon signs. Call today and save on your next LED lighting project.
